## MEI STRUCTURED MATHEMATICS

## METHODS FOR ADVANCED MATHEMATICS, C3

## Practice Paper C3-B

Additional materials: Answer booklet/paper<br>Graph paper<br>List of formulae (MF2)

TIME 1 hour 30 minutes

## INSTRUCTIONS

- Write your Name on each sheet of paper used or the front of the booklet used.
- There is an Insert booklet for use in Question 9.
- Answer all the questions.
- You are permitted to use a graphical calculator in this paper.

## INFORMATION

- The number of marks is given in brackets [] at the end of each question or part-question.
- You are advised that an answer may receive no marks unless you show sufficient detail of the working to indicate that a correct method is being used.
- Final answers should be given to a degree of accuracy appropriate to the context.
- The total number of marks for this paper is 72 .
- You are reminded of the need for clear presentation in your answers.

## Section A (36 marks)

1 Prove that the product of any three consecutive integers is a multiple of 6 .
2 (i) Sketch the graph of $y=|2 x-3|$.
(ii) Hence, or otherwise, solve the inequality $|2 x-3|<5$. Illustrate your answer on your graph.

3 Differentiate the following functions.
(i) $\quad y=\left(x^{2}+3\right)^{5}$
(ii) $y=\frac{\sin 2 x}{x}$

4 A curve has equation $y^{2}=5 x-4$.
Find the gradient of the curve at the points where $x=8$.

5 Given that $x$ and $t$ are related by the formula $x=x_{0} \mathrm{e}^{-3 t}$, show that $t=\ln \left(\frac{a}{x}\right)^{b}$ where $a$ and $b$ are to be determined.

6 (i) Find $\int(2 x-3)^{7} \mathrm{~d} x$.
(ii) Use the substitution $u=x^{2}+1$, or otherwise, to find $\int_{1}^{2} x\left(x^{2}+1\right)^{3} \mathrm{~d} x$.

7 The functions $f, g$ and $h$ are defined as follows.

$$
\mathrm{f}(x)=2 x \quad \mathrm{~g}(x)=x^{2} \quad \mathrm{~h}(x)=x+2
$$

Find each of the following as functions of $x$.
(i) $\mathrm{f}^{2}(x)$,
(ii) $\operatorname{fgh}(x)$,
(iii) $\mathrm{h}^{-1}(x)$.

## Section B (36 marks)

8 A curve has equation $y=(x+2) \mathrm{e}^{-x}$.
(i) Find the coordinates of the points where the curve cuts the axes.
(ii) Find the coordinates of the stationary point, S , on the curve.
(iii) By evaluating $\frac{\mathrm{d}^{2} y}{\mathrm{~d} x^{2}}$ at S , determine whether the stationary point is a maximum or a minimum.
(iv) Sketch the curve in the domain $-3<x<3$.
(v) Find where the normal to the curve at the point $(0,2)$ cuts the curve again.
(vi) Find the area of the region bounded by the curve, the $x$-axis and the lines $x=1$ and $x=3$.

## 9 Answer parts (i) and (iii) on the insert provided.

Fig. 9 shows a sketch graph of $y=f(x)$.

Fig. 9
(i) On the Insert sketch graphs of
(A) $y=2 \mathrm{f}(x)$,
(B) $y=\mathrm{f}(-x)$,
(C) $y=\mathrm{f}(x-2)$

In each case describe the transformations.
(ii) Explain why the function $y=\mathrm{f}(x)$ does not have an inverse function.
(iii) The function $\mathrm{g}(x)$ is defined as follows:

$$
\mathrm{g}(x)=\mathrm{f}(x) \text { for } x \geq 0
$$

On the Insert sketch the graph of $y=\mathrm{g}^{-1}(x)$.
(iv) You are given that $\mathrm{f}(x)=x^{2}(x+2)$.

Calculate the gradient of the curve $y=\mathrm{f}(x)$ at the point $(1,3)$.
Deduce the gradient of the function $\mathrm{g}^{-1}(x)$ at the point where $x=3$.
(v) Show that $\mathrm{g}(x)$ and $\mathrm{g}^{-1}(x)$ cross where $x=-1+\sqrt{2}$.

## Practice Paper C3-B <br> INSERT

## INSTRUCTIONS

- $\quad$ This insert should be used for question 9.
- Write your name in the space at the top of this sheet.
- Attach this insert to the rest of your answers.

## Insert for question 9.

(i) (A) On the axes below sketch the graph of $y=2 \mathrm{f}(x)$. Describe the transformation.

Description:
(i) (B) On the axes below sketch the graph of $y=\mathrm{f}(-x)$.

Describe the transformation.

Description:
(i) (C) On the axes below sketch the graph of $y=\mathrm{f}(x-2)$.

Describe the transformation.

Description:
(iii) The function $\mathrm{g}(x)$ is defined as follows:

$$
\mathrm{g}(x)=\mathrm{f}(x) \text { for } x \geq 0
$$

On the axes below sketch the graph of $y=\mathrm{g}^{-1}(x)$.
